AI Tool(s) Used

ChatGPT was used to assist with project planning, React/Firebase code structure, README drafting, and debugging suggestions.

Scope of Usage

The assistant generated an initial project template including authentication, chatroom logic, user profile UI, message operations, Firebase setup, and README. The student should review, modify, and understand every file before submission.

Locations

src/main.jsx: main React application logic, authentication, chatroom, message operations, profile modal, notification, and reply message behavior.

src/styles/app.css: responsive layout and CSS animation.

src/firebase/firebase.js and src/firebase/config.js: Firebase initialization.

README.md: project usage and local setup instructions.

firestore.rules and storage.rules: suggested Firebase security rules.

Prompt & Response

Prompt: From 0, help me build the complete midterm project. Response: The assistant produced a React + Firebase chatroom project template and setup instructions.

Refinement & Explanation

Before submission, replace Firebase configuration, test with multiple accounts, adjust UI and variable names using your own logic, and add screenshots or exact prompts/responses if required by the course. Explain each modified function in your final AI_reference.pdf.

Statement

AI tools were used in this assignment. The student is responsible for understanding and rewriting the code where necessary to avoid plagiarism concerns.
